How to clean your salt cell

Salt cells require regular cleaning to prevent calcium deposits from building up and preventing the production of chlorine.

For a thorough explanation on the correct use of these products, please refer to information contained on the packaging.

Why should I clean my salt cell?

Cause

- The process of salt chlorination causes calcium deposits to form on the cell.

Problem

- Low chlorine production
- Formation of algae
- Reduced cell life
- Poor water flow

Prevention

- ***Filtrite Salt Cell Protector Plus*** will assist in reducing calcium deposits and facilitate easier cleaning.

IMPORTANT:
Do not use Hydrochloric Acid as this will reduce cell life.

'Follow these simple steps to clean your salt cell'

How to clean your salt cell

Solution

Step 1

- Remove cell from chlorinator housing.
- Best results will be obtained when the cell is hosed with warm water before treatment.

Step 2

- Pour ***Filtrite Salt Cell Cleaner*** into a plastic container.

Step 3

- Immerse the salt chlorinator cell in the plastic container for around 10-15 minutes.

Step 4

- Heavily encrusted cells may require further treatment. *Never use any metal implement to dislodge calcium.*
- Reinstall salt cell.

Step 5

- Whilst the product can be re-used, best results will always be obtained by using a fresh solution.

Step 6

- We recommend that every pool owner who is sanitising his or her pool using a salt chlorinator should use our companion product, ***Filtrite Salt Cell Protector Plus***, on a regular basis.

Step 7

- ***Filtrite Salt Cell Protector Plus*** will soften any calcium deposits on the cell, making it so much easier to remove.
