How to clear up a green pool

Every pool owner has, at one time or another, done battle with the occasional algae bloom. Algae spores constantly enter the pool, brought in by wind, rain or even contaminated swimsuits or equipment. The unsightly growth can turn a sparkling pool green overnight.

Have fun!

Cause

- Out of balance water
- Presence of phosphates
- Warm temperatures
- Sunlight
- Presence of nitrates and/or carbon dioxide.

The primary cause of the algae may also be a lack of

- Proper circulation
- Filtration
- Sanitation.

Problem

- Unightly discolouration
- Short filter cycles
- Staining of pool interior
- Excessive chlorine demand

Prevention

- Proper chemical balance
- Removing phosphates from the water
- Maintain sanitiser level
- Use of a long life algacide

IMPORTANT:

Do not use *Filtrite Algygone* and *Filtrite Extreme Algacide* in any pool using an Ironiser or Nature² or a liquid chlorine feeder. In situations like this, we recommended *Filtrite Ultimate Algacide*.

'Clean up your green pool by following these simple steps'

Solution

Step 1

- Remove all excess leaves and debris from pool using a ***Filtrite Leaf Rake***.
- Brush wall and floor using ***Filtrite Pool Broom***.

Solution continued

Step 2

- Adjust pH level between 7.4 – 7.6
- Use ***Filtrite pH Down*** or ***Filtrite Pool Acid*** to lower pH
- Use ***Filtrite pH Up*** to increase pH.
- Ensure skimmer and pump baskets are clean and free of debris.
- Run filter on recirculate for 2 hours and recheck to ensure correct pH
- For cartridge filters remove cartridge.

Step 3

- Add ***Filtrite Extreme Algacide*** at 2.5 litres per 50,000 litres of pool water.
- Distribute throughout pool
- Run filter on recirculate for 2 hours.
- For cartridge filters remove cartridge.

Step 4

- Add ***Aqua Boost*** at 500 gms per 25,000 litres.
- Premix in bucket and distribute evenly throughout pool.
- Alternatively, 15 litres Liquid Chlorine per 25,000 litres pool water can be used.
- Run filter for 24 hours on recirculate.
- For cartridge filters remove cartridge.

Step 5

- The water should appear cloudy. If still green, repeat step 4.
- Run Filter for 48 hours on Filter mode.
- For Cartridge filters, reinstall cartridge.

Step 6

- Vacuum sediment from pool floor
- Backwash filter as required or clean cartridge using ***Filtrite Cartridge Cleaner***.

Step 7

- Add ***Filtrite Algygone*** at 1 litre per 50,000 litres to prevent algae growth from recurring.
- Use ***Filtrite Phosphate Eliminator*** to reduce nutrient level, have water tested for required dose

*If pool has not cleared in 48 hours, you may need to floc the pool using ***Filtrite Supa Floc***. See *How to Clear Up Cloudy Water Pool Care Guide*.*
